

```
@Component({
  selector: 'burgers-page',
  template: `
    <button (click)="addBurger()">Add Burger</button>
  `
})
export class BurgersPageComponent {
  constructor(private store: Store<State>) {}

  addBurger() {
    this.store.dispatch({ type: '[Burgers] Add One' });
  }
}
```

```
function burgerReducer(state, action) {  
  switch (action.type) {  
    case '[Burgers] Add One':  
      return [...state, action.burger];  
    default:  
      return state;  
  }  
}
```

Add Burger Command

```
@Component({
  selector: 'burgers-page',
  template: `
    <button (click)="addBurger()">Add Burger</button>
  `
})
export class BurgersPageComponent {
  constructor(private store: Store<State>) {}

  addBurger() {
    this.store.dispatch({ type: '[Burgers] Add One' });
  }
}
```
