```
function burgerReducer(state, action) {
  switch (action.type) {
    case '[Menu Page] Add Burger':
    case '[Burger Details Page] Add Burger':
      return [...state, action.burger];
    default:
      return state;
  }
}
```

```javascript
function burgerReducer(state, action) {
  switch (action.type) {
    case '[Burgers] Add One':
      return [...state, action.burger];
    default:
      return state;
  }
}
```

```javascript
function burgerReducer(state, action) {
  switch (action.type) {
    case '[Menu Page] Add Burger':
    case '[Burger Details Page] Add Burger':
      return [...state, action.burger];
    default:
      return state;
  }
}
```

Actions should capture events, not commands

```javascript
function burgerReducer(state, action) {
  switch (action.type) {
    case '[Menu Page] Add Burger':
    case '[Burger Details Page] Add Burger':
      return [...state, action.burger];
    default:
      return state;
  }
}
```
